The latest news and innovations for farmers and business men

June 30, 1830

Stella Anne's Fine Fashion

Come to Stella Anne's, where we sell the most fashionable clothing in town! It's cute! It's comfortable! And its available for you. Come buy now!
153 Saville Rd., London.

Sir W. J. Fashions

Come down to Sir William John's, we have the most comfortable fashionable clothes for men! *You will get all the ladies by wearing our clothes.*

194 Saville Rd., London

McTrickle's Haberdashery

Come buy new and fancy animal-hide hats down at McTrickle's headwear emporium. Only twenty shillings and you can bring one home today! Hand-crafted from real beaver-skin, these hats are stylish and comfortable, while still holding a professional and confident look.

391 Allendale Rd., London

The Amazing Flying Shuttle!

My name is Terry. It has been so hard weaving! It takes so long just to make one product! It is so frustrating. I just found out that this guy named John Kay invented this invention called the "Flying Shuttle". This new invention makes weaving much faster! It uses springs and levers to pull the shuttle back after it has crossed the threads. This means that it can be run by

only one person! Before this invention, I would have to use the whole family! This amazing invention put the competitors' shuttle throwers, out of business. I absolutely love this invention! The downside to the Flying Shuttle, is that it uses yarn much faster than the spinners can produce it.
-Logan Boersma

Protect the Children!!

Parents beware! Parliament do your duty! The affects of the rapid changes in industry are endangering the lives and health of England's children. The poor wee ones toil endlessly in noisy and dangerous factories up to 14 hours a day. They are beaten if they don't work hard or fast enough. Some work deep in the mines rarely seeing the light of day and are often killed in explosions or die from Black Lung disease. Rise up England! Be heard. Petition parliament to regulate businesses.

Save our children!

-Carl Flughorton

Wanted! Dead or Alive

Will Hergansnooth

For theft of one pig from
Trickle's farm
100 pound reward!

All Steamed up!

There is a new invention that's gonna change everything. Introducing the steam engine. It is a new invention that's taking the streets literally with the Rocket. The Rocket is the new way of travel that, thanks to the steam engine, goes 39km/h and I gotta say life is so much better with it. Now you can go a lot faster than any horse and carry more people! Without it we would still be in the medieval ages! It first brought its power to the coal mines. Using compressed steam, a pump gets all the water out of the mines! So why would we go back to flooded coal mines and slow travel when we've got the best thing to happen to this world? So go buy yours at the coal and steam productions for just 20\$!!!! It's in stores so come get yours today!

Disclaimer: we are not responsible for black lung or any resulting injuries from the steam engine. No refunds) Buy now!

-Kai Hilton

WANTED

One thick pig weighing about 500 pounds, ready to eat. If you have a pig to give away, come to my cottage 69 Fairview Drive.

Manure for sale.
Enrich your crops.
2 shillings a load.

65 Stinke Lane.

Introducing COKE, the new form of coal! It's easy to make but if you're too lazy to make it yourself, come down to Coal & Steam Productions to get yours for just 1\$ a pound! It's great for making cast iron! So, come on down to get yours today! Call 293-612-1734 and get 2 pounds for a 1\$. That's a double offer, two for the price of one!

Call now!

FACTORY JOBS!

Factory jobs Available. Work for me, Tom Washington. 14 pennies per 14 hour shift. Come to Washington factory on 1273 Lakeview drive to apply.

Convenient Canals Chart new course

I have such a hard time getting around England because I live in the middle of England. I just can't get all my goods in at the right place on time. But there is a new invention coming out and I think it might help me better. The invention is called the canals. They are putting them everywhere in England. So this will affect everything in my business. It's going to make my life a lot easier.

-Sydney Jorde

Building Better, Safer Bridges!

I'm a bridge engineer and I use cast iron to build bridges. It's a stronger and sturdier way to build a bridge. I've been making cast iron since 1750. I use coke, which is coal that has been heated to burn off the sulphur, to make cast iron. I get my coal

Mechanical Donkey!

I always wanted something that could help us in the factories, The Mule does just that! The Mule has helped me and my employees make lots of strong yarn very quickly. I have many of these new machines in my factory and my factory has been booming with success ever since. Even better, these machines means less workers and more profit for me! I have fired many workers, but I am also kind of worried they may form a mob and threaten me. My guards can prevent that. The mule takes the best features from the Spinning Jenny and The Water Frame and puts it into one great machine.

Our production of cloth has been extremely fast lately all thanks to Samuel Compton and his great invention. I am now very wealthy and can afford everything I need. The Mule works by twisting fibers with rollers into strong pieces of yarn. The Mule is Awesome.

-Ethan Prest

from the local mines and after using coke to melt the iron, I pour it in the moulds and let it harden. I recommend cast iron to all bridge builders.

-Grace Elgert

Outlandish Speed Record!!

The Rocket, a new way to move.

I am a small business owner and I found that moving my merchandise by road took way too long. But my fellow entrepreneurs told me about a new invention called the Rocket that would have its first official ride in a few days. One of them got me a spot on this 'train'. The morning of the ride I was very nervous. It was time to get on. I stepped up onto the rocket. It was very nerve-racking! The whistle blew and then the engine started and the train slowly began to move. But then it went faster, faster and faster until we were going much faster than horses. I thought I was going to die!! I asked the conductor after the ride how the rocket worked and he said it was run by a good old steam engine. We had been travelling 39 km per hour! I hadn't known a steam engine was really a thing. That was the best day of my life because this invention has helped my business grow so much. I am able to transport my merchandise much faster which means I get my money much faster too!

-Jenna Hunt

Long live the Rocket!

Opinion: Long Live Laissez-Faire!

My name is Owen and I own a giant textile factory. The laissez-faire policy that businesses can be free of government regulation is great! Now I never have the government or inspectors looking over my shoulder. Now I have 300 employees and they all get 3 pennies a month. I am bathing in cash. I'm very sure I could hire a few more employees and drop the wage even lower. Then I could buy more machines and hire more people. This law is heaven to business owners like me.

-Owen Voth

For Sale

Come down and get your new-breed pig! These pigs give you a lot more food and are very strong so they won't get sick. These are your ideal pigs!

Trickle's Farm, 69 Fairview Dr. London

Wanted

Small Business owner looking for gently used Spinning Jenny at a reasonable price. Write to 1880 Pigeon St., London England.

Wanted

A cast iron specialist wanted to help create bridge supports for a bridge over my creek. Call 222-222-2222 if interested or able to recommend someone.

The Steam Engine – Watt an Idea!

I have a new business in town and I have already started investing in the new textile machines that are being released, like the Mule and the Water Frame. Right now I have a lot of labourers that are working my new machines. I've heard some rumours that James watt has built a new machine. It's called the Steam Engine and it can power many machines at once. Apparently, it uses steam from boiling water that is heated up by burning coal to move a piston back and forth. The movement of the piston powers the

machine. If this is true then my business will succeed more than ever and I'll be able to make more textiles way faster than I can now. It would be a lot more efficient and will save me a lot of money. I am afraid it might put lots of people out of work, but it won't mess with my work for myself. I'll make more money, so it's okay with me. If I can get this Steam Engine then I'll be able to turn a small business into a big factory. I am very keen on this new idea and hope it works out.

-Olivia Holloway

Mad about Macadam!

Hi I'm Philip Smith, a manufacturer. My workers are just so fast and good at their jobs, that we can't keep up with transportation of our goods on the wretched roads we have. But then, James Macadam came up with a great design for roads. They are spectacular! He put large stones on the bottom and then small stones on the top. Now when it rains the water falls through so it doesn't flood. He also made the roads slanted so the water will run off. So, I can now transport my goods all over Britain without waiting for the roads to dry out or for potholes to be filled. It was all rough and horrible to travel on, my customers were enraged that their packages were always late. Well not anymore! I'm so grateful for John Macadam, creating these spectacular roads.

-Andrea Nichols

Beware Industrialization!

Ladies and Gentlemen, all these new and amazing improvements are affecting our world. Take a look outside, our skies are dark, the clouds are black. Our waters are not clear or anything. If you ask me, I'd keep everyone inside. Breathing this air is not good, especially for children, the elderly, pregnant women or the terribly sick. Keep your windows and doors closed. I think the lung problems people are having are because of the factory emissions. People should ask the government about the problem and to find a solution. Protect our health!

-Brenna Gilbert

Letter to the Editor

How can I maintain my way of life when all these new-fangled devices are taking away all my work and life? How I am supposed to try and even earn extra money? All I know, is that this new spinning Jenny is taking over all of our jobs! This new spinning Jenny not only spins faster it can spin more than one thread at a time. It can spin all of eight threads at one time. And that means it took my job, and that means that it took 6 other peoples jobs too. I hear there is going to be a mob that is going to go and tear the fangled machine apart. I actually might go and join them, because it has been a pain in the butt since it first came out!!

- Markus Nelson

Inventor Extraordinaire!

It's great to have larger fields, but how could you boost your production even more? That's where the "steam engine" comes in! I was born in Dartmouth in 1663, and by 1685 I set myself up as an ironmonger in my hometown. By the year 1712, I had invented the steam engine. The engine was operated by condensing steam drawn into the cylinder, creating a vacuum which allowed the atmospheric pressure to push the piston into the cylinder. The steam engine became an important method of draining water from deep mines, the water was heated by fire to turn into steam.

-Aiden Oliveira

Seed Drill Threatens our Livelihoods!!

- One man's opinion

My name is John Stingles and I am writing here in a period of great distress. I have lost my job as a field worker and have no income to feed my family. And now that that stupid Jethro Tull guy invented his stupid drill machine. It's stupid. His contributions with manure were welcome and fine, but this? This is putting me out of work! They don't need as many people working the fields now because it only takes 1 man and a couple horses to plant a whole field. Next thing you know, I'll have to be working in one of those new-fangled factories in the city to make pay just so my family can eat. Don't even get me started on how they're

Repairs

Is your mule broken? Do you need a repair? I am just the guy. I've got the parts, Your mule will be ready in no time. Or, buy brand new mules from straight from me. Call 1-800-305-8057. Ask for Sid.

Date-A-Farmer

Call 235-0954 to find your dreamboat. Love is waiting. Don't delay!

splitting up and selling the commons. Disgusting. -Will Davidson
